

Axiom Technology Solutions Online Backup Services

Online Backup Services

Axiom Technology Solutions is pleased to offer you the next in our line of professional IT services. Client demand had led us to develop relationships with vendors in the online backup industry.

Benefits of online backup

So how can your business benefit from implementing an online backup solution? The benefits are many:

- Your data becomes redundant - the key component of any backup strategy
- Your data is secured through banking-level encryption
- A reliable and dependable method of backup, far more so than tape-based backup alone
- Benefit from a fully-managed system that you are not responsible for maintaining
- Easily back up multiple systems

- Backup Microsoft Exchange and MS-SQL databases with ease, along with System State data.
- Eliminate the need for someone to be responsible for changing out backup tapes each day
- A cost-effective way to backup up your important data

As you can see, there are many good reasons to consider an online backup solution. For further information, please visit our website at:

Pricing information

The great part about online backup is that it's very cost effective. With dedicated tape backup systems starting out around \$2,000, the cost-effectiveness of a managed service becomes apparent. Even better - you only pay for the storage you use!

Initial onsite backup and configuration is roughly one hour of labor at your standard hourly rate.

Monthly service costs are as follows:

Initial 40 Gb: \$60.00/month
Additional 10 Gb blocks: \$7.50/month

Should there be any support needed not related to the online backup system, it would be billed at your standard hourly rate.
